Spray Dried Hectorite Applications

喷雾干燥型锂蒙脱石

What do we know about hectorites ? / 我们了解锂蒙脱石多少？

Smectite clays /绿土

ELEMENTIS
SPECIALTIES

Metal Oxide = Al_2O_3 (Pyrophyllite)

= MgOAl_2O_3 (Montmorillonite = Bentonite)

= MgOLi_2O (Hectorite)

Hectorite / Bentonite 锂蒙脱石/蒙脱石

ELEMENTIS
SPECIALTIES

	Hectorite/锂蒙脱石 [Na-Mg-Li-Silicate]	Bentonite/蒙脱石 [Na-Al-Mg-Silicate]
--	---------------------------------------	--------------------------------------

H₂O	12.5	13.7
Colour	cream	green
Platelet shape	elongated	equidimensional
Platelet size	0.08 x 0.8 x 0.001 µm	0.8 x 0.8 x 0.001 µm
Swelling ability	24 x	16 x

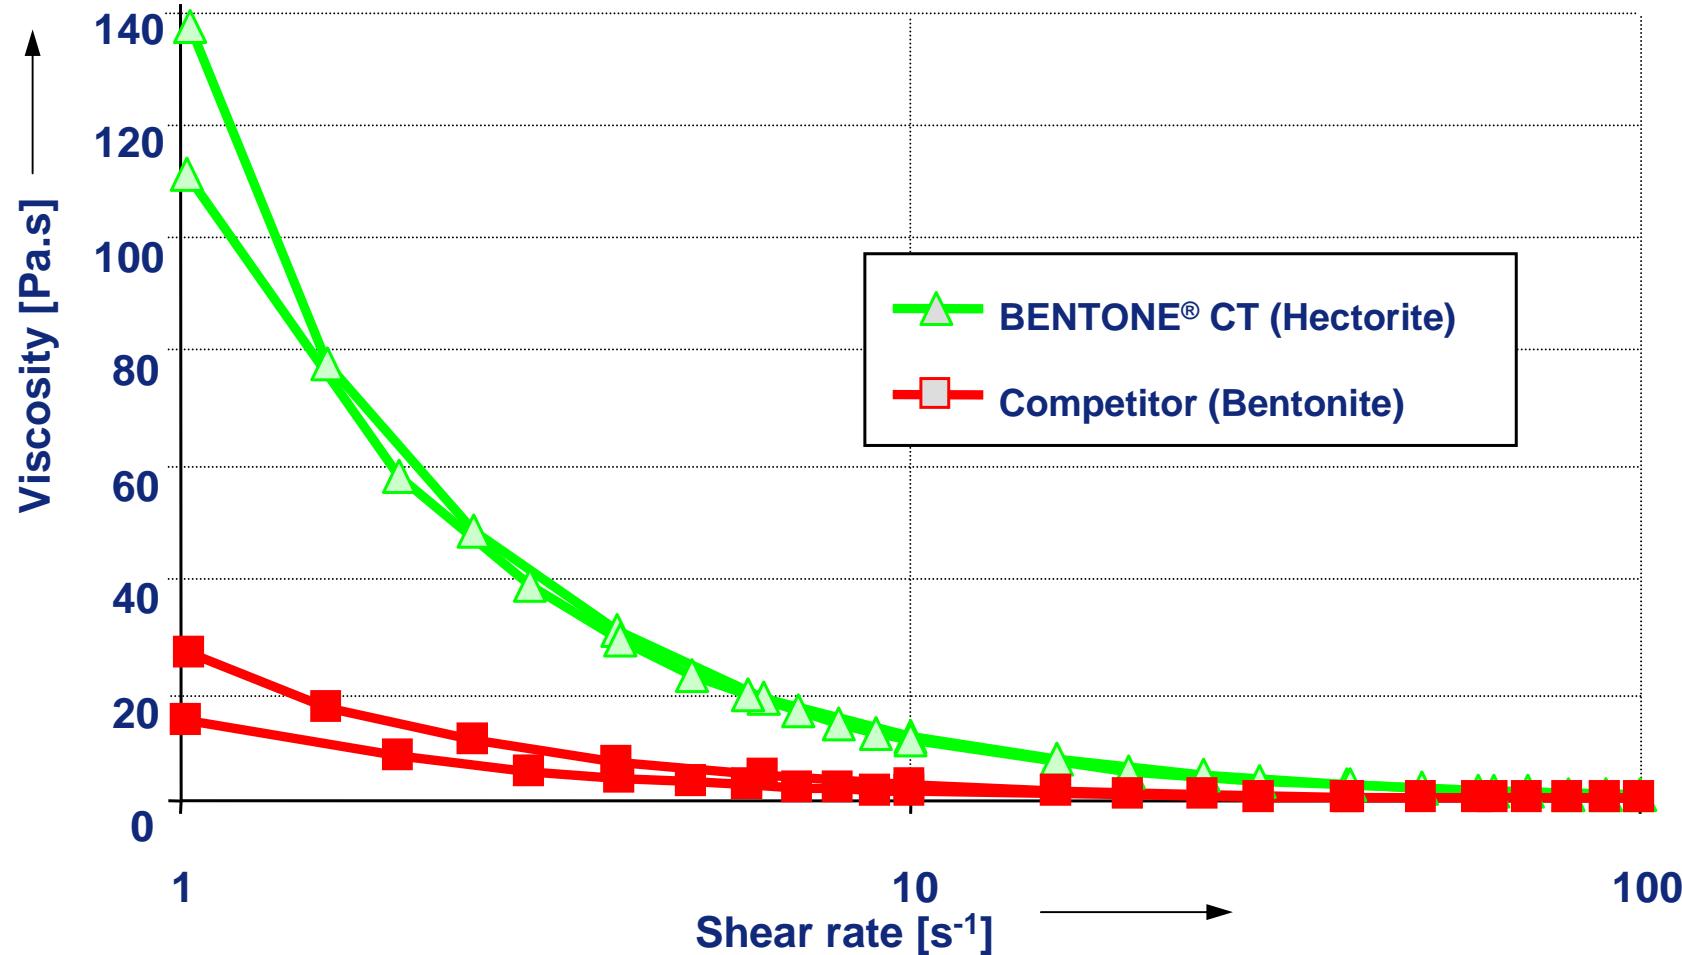

Hectorite = more particles per gram and greater gelling capacity.

Hectorite / Bentonite 锂蒙脱石/蒙脱石

ELEMENTIS
SPECIALTIES

10% pre-gel in demin. Water /10%预凝胶

Spray Dried Hectorite

ELEMENTIS
SPECIALTIES

Products

- BENAQUA 4000
- BENTONE LT
- BENTONE DE
- BENTONE EW
- BENTONE GS
- BENTONE HC
- BENTONE MA

Applications/应用

ELEMENTIS
SPECIALTIES

- Water treatment/水处理
- Ceramics/陶瓷
- Construction/建材
- Sealants/密封胶
- Coatings/涂料

ELEMENTIS
SPECIALTIES

Water Treatment/水处理 (paint detackifier /涂料凝聚剂)

Applications – Water Treatment

ELEMENTIS
SPECIALTIES

- Detackifier/coagulant chemicals are added to the water of the spray booth to build flocculates with the paint droplets/ 添加凝聚剂到喷房废水中以促进涂料液滴的絮凝
- The coagulum can either sink or float and be removed easily to allow re-processing of the water/絮凝物结团后下沉或漂浮，有利于清洁处理，便于废水重新利用

Applications – Water Treatment/水处理

ELEMENTIS
SPECIALTIES

- Historically strong bases ($\text{pH} > 8$) were used to denature (saponify) the binding agent leading to a “destroyed” and detackified paint/较高PH的基料常常会对粘结剂本身产生皂化作用。
- Reduction of stabilising surface charges of particles (paint droplets) “break” emulsions (demulsify), clay adsorb (“bread”) paint droplets and detackify/降低涂料液滴的表面电荷，进行反乳化，同时粘土吸附到涂料液滴表面
- Coagulation agent reacts with particle - Formation of microflocs by several different proposed mechanism/凝聚剂同粒子进行反应，形成絮状物

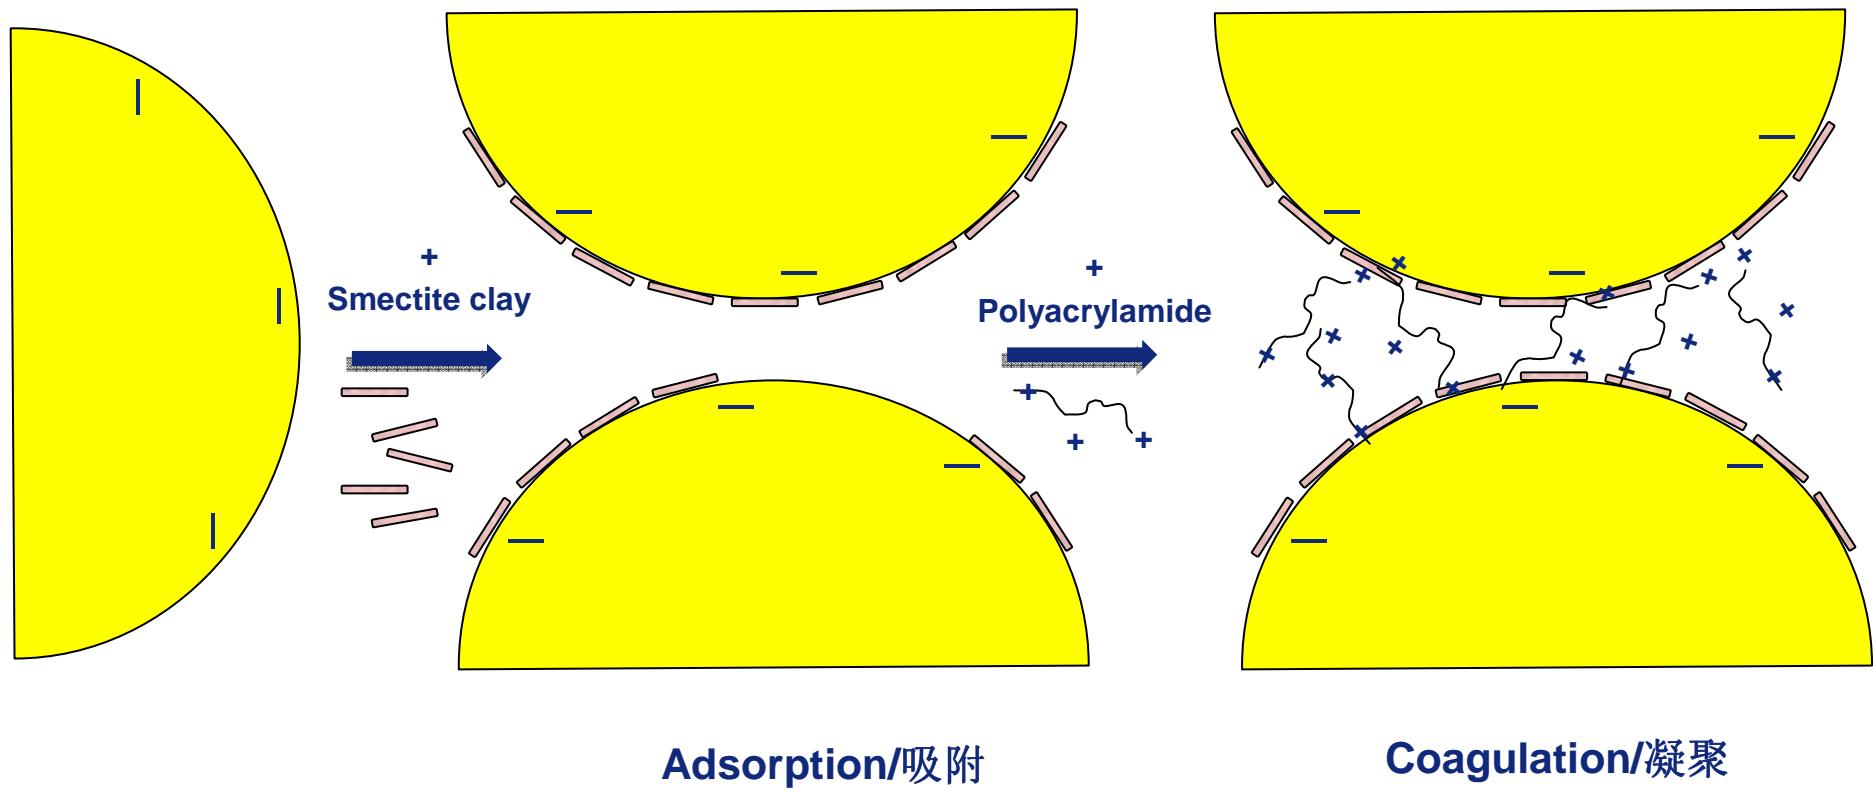

Applications – Water Treatment/水处理

ELEMENTIS
SPECIALTIES

- **Clay-based coagulation systems have the following advantages/粘土优点**
 - high adsorption/absorption power (large edge area)/高吸附能力
 - used in combination with conventional technology for the adsorption of heavy metals/和传统技术搭配使用
 - used for solvent- and waterborne paints including clear coats/适合于溶剂型和水性涂料体系，甚至清漆
 - Both sinking and floating coagulum can be adjusted/可调整其沉降性与漂浮性
- **Disadvantages of clays can be/粘土缺点**
 - too high viscosity of suspension (dosage)/较高粘度
 - sometimes difficult to de-water the sludge/有时难排除污渣
- **Hectorites have the following advantages over bentonites/锂蒙脱石优点**
 - higher coagulation power due to larger edge area/高效
 - reduced sludge build-up compared to bentonites/减少泥渣
 - better coagulation of waterborne paints, clear coats and high solids/更适合于水性涂料、清漆和高固含体系
 - cost-efficient/经济有效

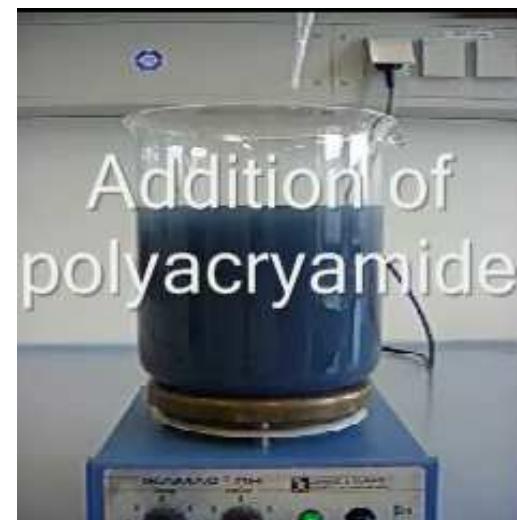

Water Treatment – Mechanism/水处理机理

ELEMENTIS
SPECIALTIES

Water Treatment – Mechanism/水处理机理

ELEMENTIS
SPECIALTIES

paint flocculation new.wmv

Applications – Water Treatment/水处理

ELEMENTIS
SPECIALTIES

BENTONE CT

- low cost applications/低价产品

BENTONE HC

- highly efficient standard product, might require a dispersing agent to reduce “slurry” viscosity/高效产品，可能需要分散剂去降低体系粘度

BENTONE DE

- highly efficient, very low “slurry” viscosities at high concentration/高效，在高浓度时具有非常低的粘度

ELEMENTIS
SPECIALTIES

Ceramics /陶瓷系统

ELEMENTIS Position

ELEMENTIS
SPECIALTIES

- large sales volumes to a few accounts/对一些大客户有较大的销量
- limited experience/较少的实际经验

Background and Definition/相关资料

ELEMENTIS
SPECIALTIES

- **Definition of Glazes/ 紫料的定义**
 - A glaze is a thin coating of glass fused to the surface of a ceramic part like a clear coat /紫面为一种熔化在陶瓷表面的透明状玻璃涂层
 - The glaze provides decorative effects (colour, texture, opacity) and functional qualities (hygienic surface, strengthened ceramic)/提供优异的装饰效果，并提高其表面功能性
- **Definition of frits/玻璃料的定义**
 - A frit is powdered glass (glaze) commercially produced to include specific oxides/粉状玻璃，其中包括粉状特殊氧化物
 - Collection of raw materials are melted and cooled down rapidly (glass), then ground to fine powder - “Glaze masterbatch”/原材料熔化快速冷却后，形成紫料母料
- **Glazes consist of up to 100% of frits/紫料本身含有将近100%的玻璃料**

Application of Glazes/釉料的应用

ELEMENTIS
SPECIALTIES

- **The powdered glaze raw materials are suspended in water and applied by/粉体釉料分散在水中，通过下列方式施工：**
 - Spraying, brushing/喷涂或刷涂
 - Dipping/浸涂
 - Bell waterfall, airless spraying/淋涂或无气喷涂
- **Glazed materials can be/釉料常用于**
 - Tableware/dinnerware, china/餐具和瓷器
 - Sanitaryware, vitreous china, tiles and many others/卫生洁具，陶瓷，瓷砖和其他用品

Rheology of Glazes/釉料之流变

ELEMENTIS
SPECIALTIES

- **The glaze suspension needs controlled rheology**
 - Suspension control/悬浮性
 - Antisettling/防沉降
 - Sag resistance/抗流挂
- **Rheological additives used/流变助剂**
 - Smectite clays like hectorite and bentonite
锂蒙脱石和蒙脱石
 - China clay (Al-silicate)/高岭土
 - Organic thickeners like CMC, Guar gum, starch
纤维素醚, 顶风米
 - Salts like Ca-chloride

Hectorites in Glazes/釉料

ELEMENTIS
SPECIALTIES

- **Advantages/优点**

- Very high rheological efficiency, high yield value/优异的流变性能
- Stable viscosity on time/粘度稳定
- High purity, no magnetic metals, e.g. Fe (discoloration during firing)/高纯度
- No thermal decomposition (gas bubbles)/无热分解
- Bio-inert/生物惰性

Hectorites for Ceramics/陶瓷

ELEMENTIS
SPECIALTIES

- **BENTONE® EW**
 - Refined and beneficiated spray-dried hectorite clay/精细型雾化干燥锂蒙脱石
 - Easy to disperse/易分散
 - Glaze rheology modifier/流变助剂
- **BENTONE HC**
 - Refined hectorite clay/精细型锂蒙脱石
 - Used as a temporary binder in ceramic mass (body) giving green strength/作为陶瓷毛坯临时基料，良好的生坯强度
- **BENTONE CT**
 - Unrefined hectorite clay, 50% active/50%非精制型
 - Used as a temporary binder in ceramic mass (body) giving green strength/作为陶瓷毛坯临时基料，良好的生坯强度
- **BENTONE OC**
 - Unrefined hectorite clay/非精制型锂蒙脱石
 - Green strength additive/良好的生坯强度
